Fred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

'n Dorner

WPI; 2001-290358/30

New factor IX/factor IXa antibodies and their derivatives useful for

increasing amidolytic coagulation disorders

activity of factor IXa, and for treating blood such as haemophilia A and haemorrhagic diathesis

Such artibodies or anti-activated Pactor IX (FIX) activity. Such artibodies or and their derivatives (including their pactor) and their derivatives present CORS apprised have Pactor VIII2 (FIVIII) codector activity of FIX activatives leads to an increase in the procequitate civity of derivatives leads to an increase in the procequitate civity of TXA, even in the procequitation of the artivity of PIXA, even in the presence of FIVIII is inhibitors. The antibodies or their credit allowed activities are used in a claimed pharmaccutical composition for treating partiants with blood obsyllation disorders, especially anomaphilia A and hemosphilia chadhesis.
feators TVII and IX. Region 2 comprises the infernation between N146 of factor YVII and Has and Has and Has of Actor YVIIA, and the interaction between R403 of factor YVIIA and the interaction between R330 of factor YVIIA. Region 3 comprises the interaction between E330 of factor IXa and D712 of factor YVIIA, and Fragments of these polypepides inhibit the interaction between E310 of factor YVIIA.
                                                                                                                                                                        New polypeptide inhibits interaction of blood coagulation factor VIIIa with factor IX a precluding activation of factor X, useful for preventing or treating coagulation disorders, such as thrombosis,
                                                                                                                              Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                              The sequences given in AAG79422-23 represent regions 2 and 3
                                                                                                                                                              atherosclerosis
                                                                                                                                                                                                                                        WPI; 2002-599771/64.

                                                                   This is a fragment corresponding to internal Aas 373-740 of human Factor-VIII which may be crosslinked resulting in increased stability and retention of high activity over extended periods of time after activation by thrombin. The polypoptide is used to prevent or treat diseases caused by the absence or deficitly of Factor-VIII in a subject senior as hasmophilia. (Updated on 25-MAR-2003 to correct W field.)

They alaci hibbit the activation of blood coagulation factor X, or inhibit blood coagulation. These peptide fragments are useful in preventing and/or treating coagulation disorders, in particular cardiovascular disorders such as thromboslie, atheroscierosla and restempsis.

The agagence is abstrar than the Al-Andomania and its produced by treating a polypoptide containing the full Al-A2 domain of full-length Factor-VIII in a produced by treating a polypoptide containing the full Al-A2 domain of full-length Factor-VIII in a chromogenic assay, but activity is a factor of two lower in a clotting assay, and the framework activity is a factor of two lower in a clotting assay, and the framework activity by thrombin at a slower trate and to a lower level ben framework 1740 (AR74098) and plasma Factor-VIII. The framework 1740 (AR74098) and plasma Factor-VIII. The framework by be produced recombinantly to reduce production conts and instability are higher than for the full length form. The fragment may be used to treat particular who have been antibodies against epitopes in the C-terminal part of the heavy chain.
                                                                              04-NOV-1995
                                                                                                          25-MAR-2003

VIII heavy chain. The sequence is shorter than the A1-A2 Gomain.
and is produced by treating a polypeptide containing the full A1-A2 domain of full-length Rector-VIII with a protease, e.g. thombin. The fragment has the same coagulant specific activity as full-length Ractor-VIII with a chronogenic assay, and is activated by thrombin at a similar rate. The fragment may be produced recombinantly to reduce production costs and improve safety, and production levels and stability are higher than for the full-length form. The fragment may be used to treat patients who have developed antibodies against be used to treat patients who have developed antibodies against by the A4-A2-A03 to courset By field.)

Asp-403, Asp-404, Asp-403, Asp-404, Sap-403 are preferably substituted by Asm, Glu-434 and Glu-440 are preferably substituted by Glm. The new derivative has the same activity as the wild-type Factor-VIII but with improved stability (the activity as the wild-type Factor-VIII) are wild decline of the activity of wt Factor-VIII). The new derivative came be used in a composition for treating diseases caused by an absence or deficiency of Factor-VIII separated on 25-War-2001 to correct by Efald.)

                                                                                                                            The new Factor-VIII derivative comprises a functional A2 domain in which Cys-592 is delated or replaced with another amino acid nor residue, preferably Ser (see ARXF952). Alternatively, Glu-720 and Olderdo C substituted with various amino acids (as in the Features). The new derivative has the same activity as the wild-type Factor-VIII but with improved scalability (the activity is maintained for a longer period compared to the rapid decline of the activity of we factor-VIII. The new derivative can be used in a composition for treating diseases caused by an absence or deficiency of Ractor-VIII. especially beenpointied.

This is the N-terminal fragment of human Factor-VIII which
crossliked resulting in increased stability and retention
activity over extended periods of time after activation by
                                                                                                Crosslinked Factor VIII polypeptide which is stable - is prapd, using this quiphosuccinimydyl, substrate or disuccinimydyl substrate in the presence of polysorbate 80 to produce a cosyulant with long lasting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The new Rector-VIII derivative comprises a functional A2 domain in which typ-692 is replaced with Set. For other (less preferred) substitutions at this site, see AMP76961. Alternatively, Giu-720 and Jacked or substituted with various maino acide (as in the Features). The new derivative has the same activity as the wild-type Ractor-VIII but with improved steability the activity is maintained for a longer period compared to the rapid decline of the activity of expectative of the rector-VIII. The new derivative can be used in a composition for treating diseases caused by an absence or deficiency of Ractor-VIII. especially hemophilia.

The sequence represents N-terminal residues 1-40 of a human Recor-
VIII heavy chain. The sequence contains entire N and A2 domains of the produced forms (1-720 in (ANRY4080)) and 1-729 in (ANRY4081)) may be produced by treatment with a processe, e.g. thrombin. The creminally truncated fragments have the same computant specific earth of the computant of the computant of the computant produced production roses and improve safety, giving things recombinantly to reduce production roses and improve safety, giving higher production levels and scability than for the full-length form. The fragments may be used to trest patients who have developed down the fragments against epitopes in the C-terminal part of the heavy chain. (Updated on 25-MRA-2003 to correct by field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    25-MAR-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
The present sequence represents a novel pro-cosquiant active factor (CVIII (PVIII) mutant protein comprising a deletion of the B domain and CV on Hillebrand factor binding site, mutuations 2018; BSSIX and 1740A and CO an addition of an anima acid sequence spaces between the A2 and A3 condains. Ractor VIII, along with calcium and phospholipid, acts as a CC cofactor for factor IXI, when it converts factor X to the activated form C (factor XA). PVIII is the cosquittion factor deficient in the CX **Chromosome-linked bleeding discorder hemophilia A Several other curtant FVIII proteins have also been created (see AN93222-29). The FVIII CC mutant FVIII proteins have also been created (see AN93222-29) and RSSX (AN93222) are resistant to activated protein C (ApC) cleavage. The FVIII CC mutant continue activated protein and von Hillebrand factor brownising a deletion of the B domain and von Hillebrand factor C binding site, a mutation at Arg740 and an addition of an amino acid configuration, and have an approximate 5-fold increase in specific contribute compared to purified wild type FVIII, while horzeasing their contribute processing affinity to von Millebrand factor improves their stability. The the mutation of the sequence specific contribute process and a provide the process their stability. The post of the process of the pro

The present sequence represents a novel pro-coagulant active factor (III (FVIII) mutant protein comprising a design of the B domain and voter of an amino acid sequence spacer between the A2 and A3 domains. Factor VIII, along with calcium and phospholipid, acts as a cofactor for factor C2 IXA, when it converts factor X to the activated form (factor A2) region (in the C3) representation factor deficient in the X-chromosome-linked bleeding continues the coagulation factor deficient in the X-chromosome-linked bleeding C4 disorder hemophilia A. Several other mutant FVIII proteins have also been created (see ANX3222-29). The FVIII mutant FVIII proteins have also continue to the coagulation factority. The FVIII capable of the protein can thigher levels than typically obsained with wild type FVIII and retains pro-coagulant activity. The FVIII contains a more specific configuration, and have an approximate 5-fold increase in capable of the configuration, and have an approximate 5-fold increase in capable of the first price of the proteins can be absoluted the first price of the first proteins can be an additional can be used to for earse the first price of the

                                                                                                                                                                                                                                                                                                                                                                                                 The RD deletion removes the DNA from Ser 741 to Ser 1657.
A major part of the sequence encoding the maturation polypeptide of factor VIIIc 1 is deleted, i.e. Gln 744 - Asp 1563.
The full length Factor VIIIc CDNA has two changes with respect to the published sequence (EFO application 160457):
CTG to CTA at Leu 242 and TTC to CTC change at emino acid residue 1880 (Phe to Leu). The product is produced in approx. 20 times higher yields than previous recombinant produced factor VIII:C and are more easily purified. The peptide is used for treating haemophilia A, both General Approximation of the produced factor and prolonged bleeding.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Genome Biol. 3:RESEARCH0083.1-RESEARCH0083.22(2002) ```

activating activity. Administration of the antibodies of their derivatives leads to an increase in the proceedinal activity of FIXA, even in the presence of FVIIIa inhibitors. This allows for rapid blood cogulation even in the absence of EVIII or FVIIIa, and the case of FVIII inhibitor patients. The antibodies or their derivatives are used in a claimed pharmaceutical composition for treasting patients with blood cosgulation disorders, especially hemosphilia A and hemonrhagic databases. The present sequence is that of complementarity determining region 3 (DM3) of an antibody having anti-Factor IX [FIX) or anti-activated Factor IX [FIXA) activity. Such antibodies and their derivatives (including those that comprise the present CDB3 peptide) have Factor VIIIa [FIII.a) cofactor activity or FIXA

######555555555555555555555

The present sequence is that of complementarity determining region (2) (CDE3) of the heavy chain of an antibody expressed by mouse by pridoma 193/ADS. This anxibody has anti-Patrior IX (FIX) or anti-activated Factor IX (FIXA) activity. It is an example of anti-ACTIVATEA antibodies of the invention. Such antibodies and their derivatives (including those that comprise the present CDE3 activating lateral to the present CDE3 activating lateral to the comprise the present CDE3 activating lateral to the present of the complete comprise the present CDE3 activating lateral to the present of the complete com
